ABOUT ME

I am an IT professional currently studying at North-West University, with a strong passion for software development. I am driven by a desire to solve real-world problems through code and continuously improve my skills. Eager to stay up to date with modern programming tools and technologies, I am committed to building a career where I can contribute to innovative, high-quality software solutions.

EXPERIENCE

Group projects

Marks

- Developed a role-based marks management system with Student, Teacher, and Admin access.
- Implemented user authentication and secure access to marks and user features.
- Collaborated with peers to ensure smooth functionality across all user roles.

Animal adoption platform

- Built a web-based animal adoption system that allowed users to view, apply for, and manage pet adoptions.
- Used Spring Boot for backend development and Postman for API testing.
- Worked in a team to ensure feature completeness and API reliability.

Office Network Simulation

- Planned and deployed a virtual office network to simulate real-world business infrastructure.
- Configured networking components including routers, switches, VLANs, and DHCP services.
- Implemented dynamic routing protocols to ensure reliable and efficient data flow across the network.
- Demonstrated strong understanding of network topology, segmentation, and IP addressing.
